

XB300 has arrived!

**Trane's smallest & most competitively priced model
is big on quality & performance**

**A Trane for
Every Home &
Every Budget**

The dream is now reality; there is a Trane system for every home and every budget with the introduction of the new Trane XB300. In the past, some dealers had a tendency to use Trane as their mid-level and high-end systems, while recommending other brands for lower tier applications. That's no longer necessary. With the XB300, Trane not only fills the gap in their lineup, but they do it with a superior product. The XB300 is a totally new product designed from the ground up to provide a Trane for every backyard. Dealers can offer Trane's quality and reliability in the entry level 13 SEER offering with the competitively-priced XB300.

The XB300 offers competitively-priced retail replacement and is ideal for new home builders and multi-family property managers. For more information, including pricing, availability and charging instructions, speak with your TM. Be on the look out for the upcoming mailing of the XB300 literature.
